

CORROSION SOLUTIONS

RUST OFF

RUST OFF is an innovative, no harmful and highly effective way to remove oxidation from ferrous materials. It's safe and doesn't attack copper, brass, aluminum, rubber and other polymers.

FEATURES

- Remove light rust up to 15 minutes;
- Non toxic, non corrosive and safe to the skin;
- Doesn't generate vapors or bad odors;
- Biodegradable and water soluble;
- Ease to use;
- Doesn't contain acids, alkalis or toxic ingredients;
- Doesn't attack unrusted steel or other materials;
- Heavy corrosion removed within 6 hours, critic cases may need more time;

HOW TO USE

Dirty materials should be degreased first, preferentially with Arclean or Roxil degreasers. Light rusted parts must be immersed in RUST OFF solution for approximately 15 minutes.

After rust has been removed, rinse the part with clean water. If there is remained corrosion spots, immerse the part in RUST OFF again, until all rust have been removed.

To avoid part re-oxidation, immerse the part dip in RUST OFF solution and let air dry. This will give a protection of two weeks against corrosion. For longer protection, consult for the suitable Zoxol corrosion preventive.
